Projection ETRS89-LAEA (EPSG:3035). Grey shading: shipping density.

KEY FIGURES

2,894
class A vessels tracked

3,880
AIS silences of 2 hours or more

496
silences explained by shore reception gaps

11
unexplained: silent transits in well-covered waters

91 %
of underway traffic in reliably covered waters

210
radar detections without AIS (Sentinel-1, wind farms excluded)

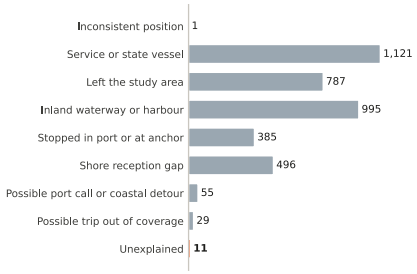

10
vessels whose MMSI is shared by two transmitters

121
slow passages over a cable or pipeline (30 min or more)

47
ship-to-ship encounters (2 hours or more)

94 %
of radar-seen vessels received by the shore AIS network

WHERE THE AIS SILENCES COME FROM

Unexplained AIS silence
MMSI shared by two transmitters
Slow passage over a cable or pipeline
Ship-to-ship encounter
Radar detection, no AIS
Cable or pipeline
Poor shore AIS reception
EEZ boundary

About these figures. One week of positions broadcast by commercial vessels (AIS class A) and received by Denmark's coastal stations. A silence is a gap of 2 hours or more between two positions of the same vessel; it is called unexplained only when no ordinary cause fits (port stay, poor coastal reception, leaving the area…). These are signals worth a closer look, not proof of wrongdoing, and no vessel is named. Full method: github.com/jauresmas/what-ais-doesnt-show

KEY FIGURES

2,002
class A vessels tracked

196
AIS silences of 2 hours or more

9
silences explained by shore reception gaps

2
unexplained: silent transits in well-covered waters

98 %
of underway traffic in reliably covered waters

99
radar detections without AIS (Sentinel-1, wind farms excluded)

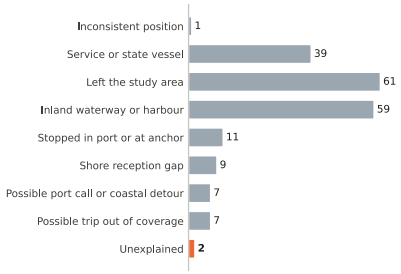

8
vessels whose MMSI is shared by two transmitters

32
slow passages over a cable or pipeline (30 min or more)

46
ship-to-ship encounters (2 hours or more)

100 %
of radar-seen vessels received by the shore AIS network

WHERE THE AIS SILENCES COME FROM

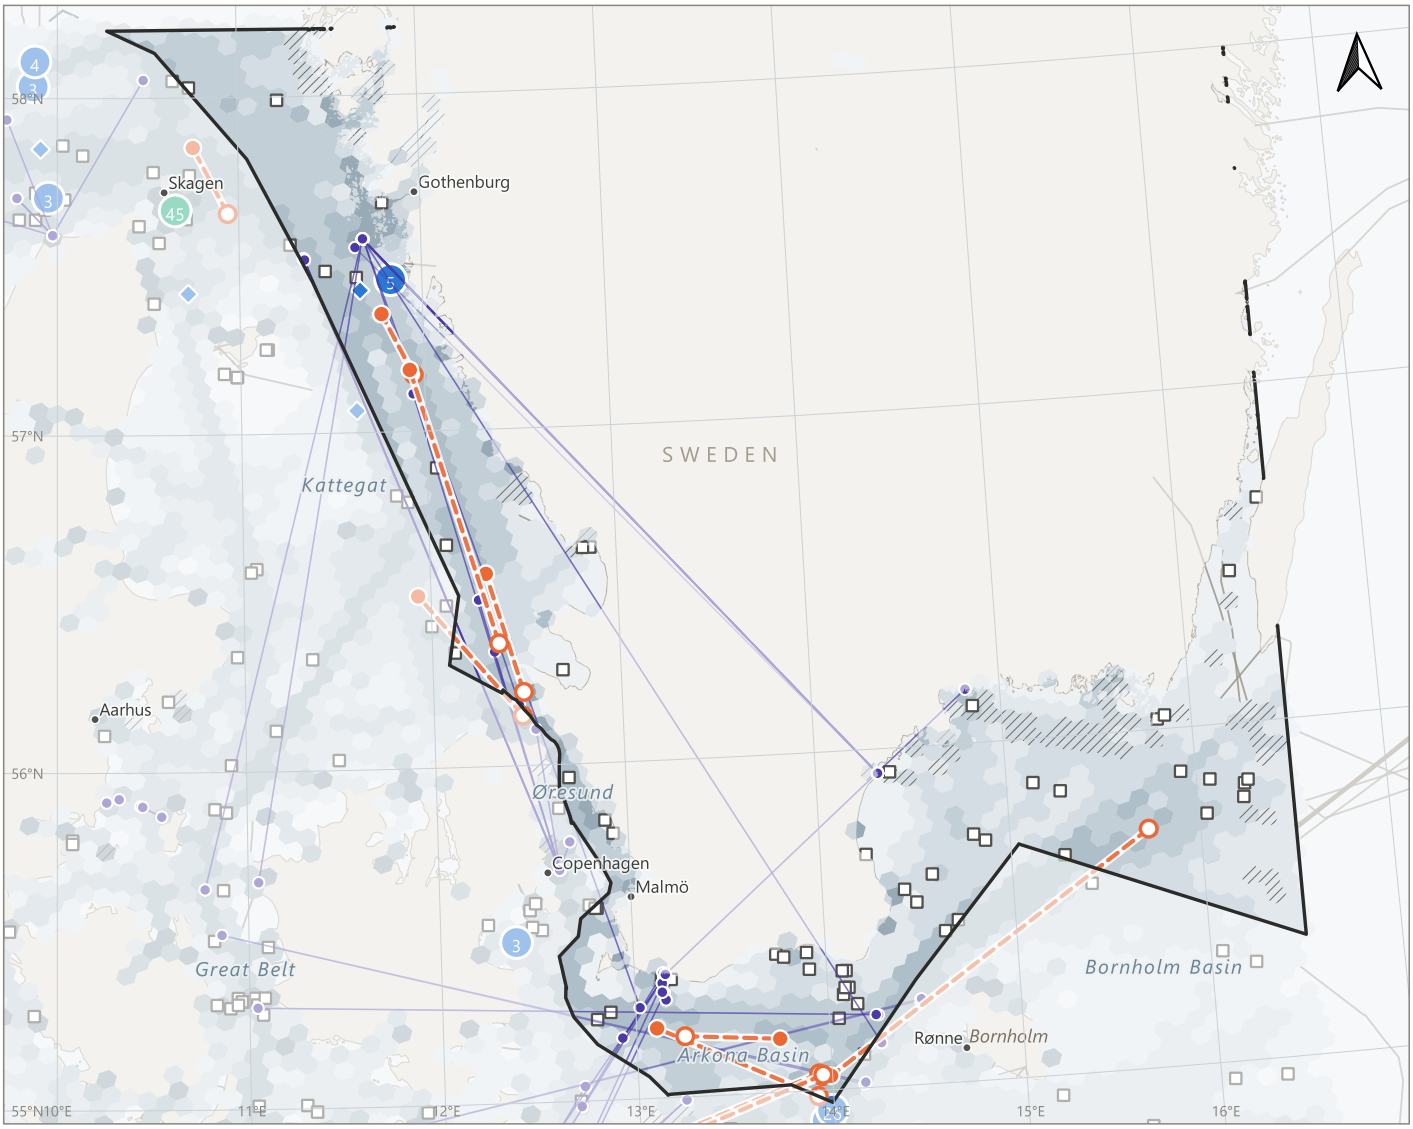

Unexplained AIS silence
MMSI shared by two transmitters
Slow passage over a cable or pipeline
Ship-to-ship encounter
Radar detection, no AIS
Cable or pipeline
Poor shore AIS reception
