ZONE SHEET · SHORE-BASED AIS · OPEN DATA

What AIS doesn't show

Fehmarn Belt · Custom area · 13–19 October 2026

0 2 4 NM

Projection ETRS89-LAEA (EPSG:3035). Grey shading: shipping density.

KEY FIGURES

703
class A vessels tracked

99 %
of underway traffic in reliably covered waters

6
AIS silences of 2 hours or more

0
vessels whose MMSI is shared by two transmitters

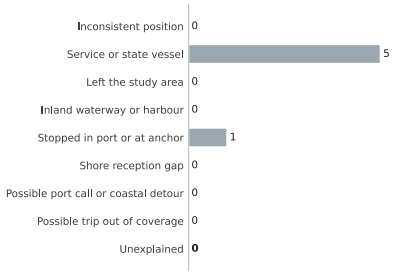

0
silences explained by shore reception gaps

9
slow passages over a cable or pipeline (30 min or more)

0
unexplained: silent transits in well-covered waters

1
ship-to-ship encounters (2 hours or more)

WHERE THE AIS SILENCES COME FROM

Unexplained AIS silence
MMSI shared by two transmitters
Slow passage over a cable or pipeline
Ship-to-ship encounter
Cable or pipeline
Poor shore AIS reception
EEZ boundary

Method. Positions of class A vessels from the Danish shore AIS network, cleaned and thinned to one per minute. Shore coverage is measured from the traffic itself on an H3 grid, counting vessels lost while crossing each cell. A silence of 2 hours or more is called unexplained only after ruling out, in order: service or state vessel, exit from the area, inland waterway, port stay, reception gap, possible port call and possible trip out of coverage. Indicators flag deviations from expected behaviour, not offences; vessels are pseudonymised.
